These arborists and tree service professionals have attended one or more trainings on sudden oak death identification and management since 2011. Choose a professional by calling and talking with them. Ask them questions to determine if they have the knowledge and experience to provide the services you need. Ask your neighbors if they have a tree service they like.

When considering treating your oak with Agrifos, remember:

- It is applied 1x per year or less
- Best applied in November
- Use the bark spray application method; the Injection application is not suggested at this time

Check the [ISA website](http://www.isa-arbor.com) (International Society of Arboriculture) for more local arborists.
