Grower Meetings for European Grapevine Moth
Presented by UC Cooperative Extension Sonoma County

The county and state have placed nearly 3,500 pheromone traps for the European Grapevine Moth (EGVM) in Sonoma County.

The number of traps with confirmed moths is increasing - along with the size and number of quarantine areas.

Currently, over 10,000 vineyard acres in Sonoma County are in the quarantine. More acres are being added. Growers need to learn how to effectively control this pest. Timing your sprays is critical **now** and later this summer. Sanitation is just as critical to prevent the spread of this pest.

Meetings will be held **within the next few days** in barns in 3 different locations. The same information will be presented at each meeting. I realize this is short notice, but your attendance is strongly encouraged.

No cost, no frills, no food, no chairs (bring your own if you wish).
